SUMMARY

Senior BI developer and data lead with 7+ years in data analytics and 10+ years across engineering and data. Turns operations, sales and finance data into recommendations on revenue, cost and process efficiency, and leads the projects, governance and adoption that make them stick. Led a Sales & Finance semantic model adopted by 500+ users that flagged £5M+ (~$6.5M) in contract revenue for review. Mechanical engineer who raised packing-machine MTBF 6× with sensor data and Lean Six Sigma methods. Bilingual English/Spanish.

SKILLS

- **BI & Modeling:** Power BI, DAX, Power Query (M), advanced Excel (Power Pivot), semantic models, star/galaxy schema, row-level security, deployment pipelines, KPI design, data storytelling, PowerPoint
- **Data Engineering:** SQL (T-SQL), Python (PySpark), Microsoft Fabric (Lakehouse, Warehouse, Dataflows Gen2), ETL/ELT
- **Leadership & Governance:** stakeholder management, requirements gathering, data governance, data quality, master data management, KPI standardization, change management, mentoring, coaching
- **Project Delivery & Platforms:** project management, Azure DevOps, Agile/Scrum, sprint planning, backlog management, SAP ECC/Fiori (ERP), NetSuite, Dayforce
- **Manufacturing & Process Improvement:** Lean Six Sigma methods, root cause analysis, OEE, MTBF, SPC, Lean manufacturing, cost-benefit analysis, bills of materials (BOM)
- **AI & Automation:** AI-assisted development (Claude Code, MCP servers), LLM workflow automation
- **Languages:** English (fluent), Spanish (native)

EXPERIENCE

Senior Business Intelligence Analyst
Biffa Waste Services — London, United Kingdom (Hybrid)
01/2025 – 11/2026

- Led end to end the enterprise Sales & Finance semantic model in Power BI, a galaxy schema over NetSuite, Dayforce and contract data, which became the single source of truth for 500+ active users across every UK region, all sales channels, Finance and leadership.
- Flagged £5M+ (~$6.5M) in annualized contract revenue pending rollover through contract-health reporting; about 30% went to the business as recoverable revenue and the rest was obsolete contracts, suspended to clean up the data.
- Improved internal process efficiency by replacing 5+ siloed Excel processes (pre-sales CRM, revenue projection, rolling revenue, churn, contract-health checks), eliminating ~13,500 manual requests a year, worth ~$52K (£40K) in labor.
- Partnered with the Sales and Finance business owners to standardize revenue definitions, including the variants used for bonus calculations, so reporting and sales bonuses run on one agreed number.
- Brought a structured approach to project management and execution: introduced Azure DevOps sprint delivery for the 8-person BI team, with a prioritized, visible backlog and cost-benefit sizing (time saved × labor cost, revenue at risk) for each project.
- Owned model governance and administrative controls (row-level security, deployment pipelines, refresh reliability); cut refresh time from 20 to 5 minutes while covering more data.

Business Intelligence Executive
BAT (British American Tobacco) — Southampton, United Kingdom
12/2022 – 01/2025

- Built Power BI SLA-compliance reporting for the global Operations Data Management team: 3,000+ SKU master-data change requests a month (bills of materials, leaf and packaging specifications) in SAP ECC/Fiori across five continents.
- Designed a change-request selection tool that routes users to the right option among 200+ CR types, cutting selection time from ~5 to ~1 minute (200+ hours saved a month) and incorrect requests by ~10%.

- Ensured strict process adherence and high data-quality standards for SAP master data, helping sustain the 99% master-data quality compliance target through monitoring, prevention and corrective fixes.
- Delivered executive data storytelling in PowerPoint and Power BI for regional and global Continuous Improvement / Work Process Improvement leadership.

Business Intelligence Engineer
BAT (British American Tobacco) — Caracas, Venezuela
06/2021 – 12/2022

- Built an end-to-end Power BI KPI suite on machine sensor data (stops, MTBF, OEE, waste) for 12 production lines, used by 80+ technicians, admin staff and factory leaders.
- Partnered with maintenance on root-cause analysis using Lean Six Sigma methods, raising packing-machine MTBF from under 10 to 60+ minutes (6×) and plant OEE from ~65% to ~71%, beating the 70% target.
- Automated data cleansing and transformation in SQL and Power Query, replacing manual production reports.
- Worked day to day with 40+ factory technicians (line manager for about 20), embedding the KPI suite into shop-floor routines to drive adoption.

Business Intelligence Developer
ASIS Consulting — Caracas, Venezuela
07/2019 – 06/2021

- Delivered Power BI solutions for 5+ major tax-consulting clients: financial modeling, tax and transactional reporting with DAX time intelligence.
- Administered Power BI Service across client environments (workspace governance, deployment, user access) and translated stakeholder requirements into scalable data models with the Data Engineering team.

3D Printing Engineer
3D TECH — Caracas, Venezuela
03/2017 – 06/2019

- Operated and maintained the lab's 3D printers, producing 6+ medical models a month (mainly jaw models) used by doctors to plan procedures and prosthetics.

Junior Project Engineer
Venezuelan Heavy Industry CA (VHICOA) — Bolívar, Venezuela
02/2016 – 02/2017

- Worked on 2 high-pressure vessel projects for the oil industry ($30M+ each) to ASME, AWS and API standards: drawings, NDT and hydrostatic testing, and materials, labor and progress tracking in Excel.

EDUCATION

Bachelor of Engineering (B.Eng.), Mechanical Engineering
Universidad Metropolitana — Caracas, Venezuela | 2015

AWARDS & TRAINING

- Nominee, Diamond Awards (high-performer recognition), Biffa Waste Services, for the Sales & Finance semantic model
- Digital Learner Award, BAT (British American Tobacco)
- Training: Project Management (Tecnología Financiera, 2016); Change Management Foundations (LinkedIn Learning)
